

NCE Press Announcement

NCE Delivers RoHS to the Data Center in the USA

El Cajon, CA

June 2010

Many companies are challenged with compliance to RoHS regulations when servicing their multi-vendor data center environment. NCE has taken that challenge seriously and has developed a complete, compliant set of service and support practices which support their client's RoHS compliance.

NCE Computer Group's RoHS service solutions are part of their total commitment to environmental regulation compliance, and promoting a GREEN computing environment on a global basis. NCE has established a process for maintaining the integrity of RoHS compliant units received for repair. They communicate these requirements to all suppliers and advise them of the expectations for their assistance in ensuring that maintaining compliance with the RoHS directive is a company-wide priority.

NCE now has a computer tracking system with the capability of providing the necessary recording systems to track internal recovery statistics as required by the WEEE directive. An award-winning organization, NCE was founded in 1981 and is a tier one independent world-wide service organization.

Background

RoHS is the acronym for Restriction of Hazardous Substances. RoHS, also known as Directive 2002/95/EC, originated in the European Union and restricts the use of specific hazardous materials found in electrical and electronic products. All applicable products in the EU market after July 1, 2006 must pass RoHS compliance.

The substances banned under RoHS are lead (Pb), mercury (Hg), cadmium (Cd), hexavalent chromium (CrVI), polybrominated biphenyls (PBB) and polybrominated diphenyl ethers (PBDE)

The restricted materials are hazardous to the environment and pollute landfills, and are dangerous in terms of occupational exposure during manufacturing and recycling.
